

Looking into the Future 2

Jessups Solar Squad theme for 2010.

Those who missed out on the rebates we have a special on a 1.520 DC system 8 x 190 watt [Suntech](#) panels with SMA SB 1700 Inverter, for \$4985.00 after rebates, installed within CBD. This will generate approx \$360.00 in saving on power. Those who missed out on grants it was replaced by a RET rebate a 5 times multiplier up to 1.5 kW that helps to reduce cost of purchase. We can design to suit the roof space and can quote other Panels [BP](#), [Suntech Pluto](#), [Sharp](#) and [Conergy](#). With the likely hood of price increase, the savings will be greater. We are also lobbying government to increase the net tariff to 40 cents a kW on any excess back to the grid, however no election in the pipeline to win votes at the moment. Other energy saving sources are in Hot water, where 30% of the household account is devoted, we have units that can save up to 80%, the [AAE evacuated tube system](#), currently on special for a 250 litre stainless steel tank for \$3,887.00 including installation, and if replacing a electric unit, you will receive a further \$1,000.00 in rebate after installation. Those in the Hobart area receive a further \$500,00 discount of their rates Other solar hot water systems are [Conergy Split systems](#) and roof mounted, the Heat Pump systems of [Quantum Energy](#) and [Siddons Solar stream](#), both these models we can do for domestic and commercial use. All these products are an added reduction to greenhouse gasses and help you save money plus the environment. It is strongly recommended that if you go grid connect, then a Solar hot water is installed, otherwise savings on power will be running the guzzling electric hot water unit. In both Grid systems and solar hot water we are Authorized [Aurora preferred suppliers](#), that gives you AOK customer service guarantee, they trust us to do it right for you for extra comfort beyond Jessups Solar Squad's local Tasmanian company depth of service commitment to our customers for over 70 years on top of manufactures warranty We cover you on full labour too ... not just the parts only warranty that proliferates the somewhat immature market place, that will see shake ups as it matures no doubt leaving a trail of customer disasters with little redress. History will repeat itself. How many T.V. brands have we seen come and go just in the last 5 years alone! Let alone to cover a 25-year warranty!!

Back to our theme, looking into the future, we now conduct School classrooms education on solar Energy, this gives the children an insight to why parents are talking about Solar and for them to know the benefits when they become adults, as they are the future, and hopefully some will become scientist to even improve on what we have now. Also within adult education this covers a course in the grid connect system.

Solar Squad is moving to the Corner of York and Wellington Street on the 1st July, where all the products will be on display.

So lets help the planet and our pockets and turn to the sun for both types of savings.

[Quantum Commercial Heat Pump](#) systems continue to be in heavy demand as more and more Licensees and property owners etc. make the move to massive savings in hot water costs. (link testimonial here.) Mt St Vincent's Hospital state savings on power of over \$20,000 in just 9 short months

Solar Squad is moving to a new bigger more predominant site soon, with bigger and brighter premium showroom and facilities. And additions to our fleet of vehicles will be more noticeable about the state.

Solar Squad is moving to the Corner of York and Wellington Street on the 1st July, where all the products will be on display
